

NLE Announces partnership with Fiberlink Communications

Orem, Utah, March 24, 2008 – NLE, of Orem Utah, is pleased to announce a partnership between NLE and Fiberlink Communications of Blue Bell, Pennsylvania. FiberLink allows Enterprise to reduce resource strain and costs of mobility by Consolidating Access into a Single Software Solution. “Put simply “, says Eric Winegar, President of NLE, “The Mobile NAC solution from Fiberlink is a cost effective means to take your corporate laptops out of the Wild and enforces your corporate mobility policies. Mobile NAC™ is the first Network Access Control solution designed specifically for the mobile workforce. “Paper to practice is one of the largest security challenges for a mobile workforce.” continued Winegar.

Fiberlink Communications Corporation’s, Extend360 solution helps companies reduce their software image footprint by consolidating multiple connection managers into one platform for mobility. Network Access Control, or NAC, is a powerful idea that promises to mitigate the damage done by viruses, hackers and other threats to corporate information. Fiberlink’s Mobile NAC™ protects corporate networks from non-compliant endpoints. But it also addresses “the mobile blind spot” by protecting the endpoints themselves and the confidential data on them with “always on” monitoring and remediation.

Mobile NAC™ uses the Extend360 Mobility Platform™ to provide the four basic functions of Network Access Control: Policy Management, Endpoint Monitoring and Assessment, Quarantine and Enforcement, and Remediation.

Fiberlink’s Extend360 solution solves three hard-to-balance objectives – saving money, making wireless connectivity easy, and fortifying IT security. Fiberlink can meet the mobility and security needs of IT for everything wireless - roaming, corporate, home, and 3G. This platform is just one more example of our role as a pace-setter in our industry, enabling IT to connect, control, secure and save. 85% of the time a mobile computer is not connected to the corporate network. NLE’s Fiberlink solution solves these problems of compliance 100% of the time.

Whether you are maintaining a legacy network, or preparing for consolidation, NLE has the experience, skills and relationship to make your IT projects a success. Contact us today for further information.

About NLE

NLE is a Network Value Added Reseller that has been serving education, state and local government, health care, large enterprises and other organizations for more than 16 years.
